Date: 5th February 2019

Dear Parents and Carers,

With technology being all around us we would like to find out what kinds of ICT (information computer technology) your child uses. This forms part of the 'Understanding the World' strand in the early years outcomes and will help with our assessments. It will also help us to plan ICT in the future. Do not worry if your child does not have access to any of these things outside of school, it will be useful for us to know as much about individual children's experiences as possible.

Does your child use a home computer? What do they use it for?

Do they ever access the internet? What do they do online

Does your child have a mobile phone/tablet they can use (this doesn't have to belong to the child)? What do they like to do on it?

Does your child play on a games console? Which one? What games do they like to play?

Can they take photos or videos on a portable device? Do they need help or can they do it independently? Can they use a camera? Phone? Tablet? Can they look back on the photos and delete or edit them?

Do you have satellite T.V? Can your child look up programmes they want to watch? Can they access the programmer and locate previously recorded programmes?

Can they use technology for a purpose? For example, to programme a toy, use remote control cars, to draw a picture, watch a video/film, skype people? Please give examples

Do you have a smart speaker at home (e.g. Alexa/Amazon Echo)? Does your child use it? If so, what do they do?

How do you monitor what your child uses?

Any comments

Please give as much detail as possible, we look forward to hearing your responses.

Many thanks,

EYFS team
